

SYLLABUS, COURSE OUTCOMES AND MAPPING (CO's and PO's)

SRI VENKATESWARA UNIVERSITY COLLEGE OF ENGINEERING::TIRUPATI

DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING

M.TECH (POWER SYSTEMS) DEGREE PROGRAMME

MTech (Power Systems)

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

PEO-1) Graduate will have successful academic and research career.

PEO-2) Graduates will have employment in public and private sectors and resolve economic, social and environmental issues.

PROGRAMME OUTCOMES (PO'S)

The post graduates are able to

PO-1) Acquire in–depth knowledge and integrate with existing knowledge to solve Power system problems in wider and global perspective.

PO-2) Analyse complex power system problems critically.

PO-3) Find optimal solutions for power system problems considering social and environmental issues.

PO-4) Carryout researches in one or more domains of power engineering

PO-5) Create/select appropriate and upgraded tools like MATLAB to solve present day power system problems.

PO-6) Carryout collaborative and multidisciplinary projects & research considering technical & economic aspects

PO-7) Communicate effectively socio-economic problems related to power systems by appropriate documentations and presentations.

PO-8) Incline for independent life-long learning.

PO-9) Exhibit social responsibility adhering to ethical values.

PO-10) Make corrective measures based on their own experiences.

MAPPING OF PEO'S WITH PO'S

	PO-1	PO-2	PO-3	PO-4	PO-5	PO-6	PO-7	PO-8	PO-9	PO-10

EE PSC 203	<p align="center">OPERATION & CONTROL OF INTERCONNECTED POWER SYSTEMS</p> <p><i>Instruction : 4 hr / week Credits : 4 Assessment : 20 + 20 + 60</i></p>
1	<p><u>SYLLABUS:</u></p> <p align="center"><u>UNIT-I</u></p> <p>Economic operation of power systems : Introduction – operating cost of a thermal plant – Economic dispatch neglecting losses and no generation limits – economic dispatch neglecting losses and including generation limits, Economic dispatch including losses – derivation of loss formula</p> <p align="center"><u>UNIT-II</u></p> <p>Hydrothermal scheduling – Hydroelectric power plants – Scheduling of hydro power plant – hydro thermal scheduling- problems.</p> <p align="center"><u>UNIT-III</u></p> <p>Unit commitment and optimal power flow; constraints of unit commitment problem – Solution methods of unit commitment priority list methods – Dynamic programming approach to solve the unit commitment problem – optimal power flow solution – Elementary treatment of optimal power flow with and without constraints.</p> <p align="center"><u>UNIT-IV</u></p> <p>Load frequency control : The load frequency control problem – Basic p-f and Q-V control loops of a synchronous generator – Governor model – prime mover model – Generator model – Load model – Block diagrams representation of an isolated single area power system – steady state and dynamic responses of uncontrolled and proportional plus integral control of single area power system – load frequency control of two-area power system.</p> <p align="center"><u>UNIT-V</u></p> <p>Automatic voltage regulator – modeling of amplifier, exciter, Generator and sensor – A simplified automatic voltage regulator block diagram – Excitation system stabilizer – Rate feedback and PID controller – automatic excitation generation control - optimal feed back design..</p> <p><u>Text Books:</u></p> <ol style="list-style-type: none"> 1. “Power System Analysis” by HadiSaadat, Tata Mc.Graw Hill International. 2. “Modern Power system analysis” by J.Nagrath& DP Kothari, Tata Mc.Graw Hill second edition. 3. “Power System Analysis and design” by B.R.Gupta wheeler publishing 4. “Electrical energy system theory” by O.I.Elgerd Tata Mc Grawhill Ltd second edition. 5. Power system control and stability : by Anderson Foud

2	COURSE OUTCOMES (COS): students are able to										
	CO-1	Acquire knowledge on optimum operation and scheduling of thermal and hydel plants, unit commitment, load frequency control and automatic voltage generation.									
	CO-2	Solve economic dispatch, unit commitment, load frequency control and automatic voltage generation using conventional method									
	CO-3	Select and apply appropriate methods to operate inter connected power systems most economically and at constant frequency by optimum utilization of fuels at different loads.									
3	MAPPING (CO's and PO's)

EE PSE 209	PROJECT WORK																																																																																					
	<i>Instruction : 3hr / week</i>			<i>Credits : 4</i>			<i>Assessment : 20 + 20 + 60</i>																																																																															
1	<p><u>SYLLABUS:</u></p> <p>The Evaluation of the project work are to be carried out in the following way:</p> <ol style="list-style-type: none"> 1. Continuous Evaluation through guide. 2. An open pre-submission seminar by the student. 3. End-semester University Examination (An open seminar followed by a Viva-voce) 																																																																																					
2	COURSE OUTCOMES (COs): students are able to																																																																																					
	CO-1	Prepare comprehensive report based on literature survey.																																																																																				
	CO-2	Select a suitable problem relevant to power systems with an attention to real life problems faced by the society																																																																																				
	CO-3	Find solution either through simulation or through practical work.																																																																																				
	CO-4	Present the results from the work comprehensively through presentation.																																																																																				
	CO-5	Present his/her work in a conference or publish the work in a peer reviewed journal																																																																																				
3	MAPPING (CO's and PO's)
